# Datasheet: 24V 9F ULTRACAPACITOR MODULE

1. Surge Voltage  
Absolute maximum voltage, non-repetitive. Duration not to exceed 1 second.

2. "Typical" values represent mean values of production sample.

3. Rated Capacitance & ESR<sub>DC</sub> (measure method)  
 • Capacitance: Constant current charge with 1A to V<sub>R</sub>, 5 min hold at V<sub>R</sub>, constant current discharge with 1A to 2.2V.  
 • ESR<sub>DC</sub>: Constant current charge with 1A to V<sub>R</sub>, 5 min hold at V<sub>R</sub>, constant current discharge with (40 \* C \* V<sub>R</sub>[mA]) to 2.2V.  
 e.g. in case of 24V 9F module, discharge with 40 \* 9 \* 24 = 8,640 mA.

$$C = \frac{I \times (t_2 - t_1)}{V_1 - V_2}$$

$$ESR_{DC} = \frac{\Delta V}{I}$$

where C is the capacitance (F);  
 I is the absolute value of the discharge current (A);  
 V<sub>R</sub> is the rated voltage (V);  
 V<sub>1</sub> is the measurement start voltage, 0.8xV<sub>R</sub> (V);  
 V<sub>2</sub> is the measurement end voltage, 0.4xV<sub>R</sub> (V);  
 t<sub>1</sub> is the time from start of discharge to reach V<sub>1</sub> (s);  
 t<sub>2</sub> is the time from start of discharge to reach V<sub>2</sub> (s);  
 ESR<sub>DC</sub> is the DC-ESR (Ω);  
 ΔV is the voltage drop during first 10ms of discharge (V).

4. Typical Leakage Current  
 • Current measured after 72 hrs at rated voltage and 25°C. Initial leakage current can be higher.  
 • If applicable, module leakage current is the sum of cell and balancing circuit leakage currents.

5. Maximum Peak Current  
 • Current needed to discharge cell/module from rated voltage to half-rated voltage in 1 second.

$$I = \frac{\frac{1}{2}V_R}{\Delta t / C + ESR_{DC}}$$

where Δt is the discharge time (sec); Δt = 1 sec in this case.

• The stated maximum peak current should not be used in normal operation and is only provided as a reference value.

6. Energy & Power (Based on IEC 62391-2)

• Maximum Stored Energy, E<sub>max</sub> (Wh) =  $\frac{\frac{1}{2}CV_R^2}{3,600}$

• Gravimetric Specific Energy (Wh/kg) =  $\frac{E_{max}}{mass}$

• Usable Specific Power (W/kg) =  $\frac{0.12V_R^2}{ESR_{DC} \times mass}$

• Impedance Match Specific Power (W/kg) =  $\frac{0.25V_R^2}{ESR_{DC} \times mass}$

• Presented Power and Energy values are calculated based on Rated Capacitance & Rated (Max.) ESR<sub>DC</sub>, Initial values.

7. Cycle Life Test Profile

Cycle life varies depending upon application-specific characteristics. Actual results will vary.

8. Per United Nations material classification UN3499, all Maxwell ultracapacitors have less than 10 Wh capacity to meet the requirements of Special Provisions 361. Both individual ultracapacitors and modules composed of those ultracapacitors shipped by Maxwell can be transported without being treated as dangerous goods (hazardous materials) under transportation regulations.

9. BOL: Beginning of Life, rated initial product performance

EOL: End of Life criteria.

• Capacitance: 80% of min. BOL rating

• ESR<sub>DC</sub>: 2x max. BOL rating
