## FEATURES AND BENEFITS
- High performance product with low ESR
- Exceptional shock and vibration resistance
- Long lifetimes with up to 100,000 duty cycles*
- Compliant with RoHS and REACH requirements

## APPLICATIONS
- Flashlights
- LED
- Memory Back-Up
- Portable Hand Tools
- Solar Charger
- Off-Grid Lighting
- Automotive Subsystems (Power Windows and Door Locks)

## PRODUCT SPECIFICATIONS

*Results may vary. Additional terms and conditions, including the limited warranty, apply at the time of purchase. See the warranty details for applicable operating and use requirements.*
1. Surge Voltage
   Absolute maximum voltage, non-repetitive. Duration not to exceed 1 second.

2. “Typical” values represent mean values of production sample.

3. Rated Capacitance & ESR_{DC} (measure method)
   • Capacitance: Constant current charge to V_{DC} with 250 mA, constant voltage charge at V_{DC} for 5 min., constant current discharge to 0.9 V with 250 mA.
   • ESR_{DC}: Constant current charge to V_{DC} with 250 mA, constant voltage charge at V_{DC} for 5 min., constant current discharge with 4 * C * V_{DC} [mA] to 0.9 V. e.g. in case of 2.3V 300F pseudo cell, 4 * 300 * 2.3 = 2,760 mA.

4. Maximum Leakage Current
   • Current measured after 72 hrs at rated voltage and 25°C. Initial leakage current can be higher.
   • If applicable, module leakage current is the sum of cell and balancing circuit leakage currents.

5. Maximum Peak Current
   • Current needed to discharge cell/module from rated voltage to half-rated voltage in 1 second.
   \[
   I = \frac{1}{\Delta t} \left( \frac{V_{DC}}{C} + ESR_{DC} \right)
   \]
   where \( \Delta t \) is the discharge time (sec); \( \Delta t = 1 \) sec in this case
   • The stated maximum peak current should not be used in normal operation and is only provided as a reference value.

6. Energy & Power (Based on IEC 62391-2)
   • Maximum Stored Energy, \( E_{\text{max}} \) (Wh) = \( \frac{1}{2}\left( V_{DC}^2 \right) \times \text{mass} \)
   • Gravimetric Specific Energy (Wh/kg) = \( \frac{E_{\text{max}}}{\text{mass}} \)
   • Usable Specific Power (W/kg) = \( \frac{ESR_{DC} \times \text{mass}}{0.12V_{DC}} \)
   • Impedance Match Specific Power (W/kg) = \( \frac{ESR_{DC} \times \text{mass}}{0.55V_{DC}} \)
   • Presented Power and Energy values are calculated based on Rated Capacitance & Rated (Max.) ESR_{DC}, Initial values.

7. Cycle Life Test Profile
   Cycle life varies depending upon application-specific characteristics. Actual results will vary.

8. Per United Nations material classification UN3499, all Maxwell ultracapacitors have less than 10 Wh capacity to meet the requirements of Special Provisions 361. Both individual ultracapacitors and modules composed of those ultracapacitors shipped by Maxwell can be transported without being treated as dangerous goods (hazardous materials) under transportation regulations.

9. BOL: Beginning of Life, rated initial product performance
   EOL: End of Life criteria.
   • Capacitance: 70% of min. BOL rating
   • ESR_{DC}: 2x max. BOL rating
